## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 18 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by French 429'. For the reasons set forth in the prior office action, the French patent anticipates the claimed subject matter.

### ***Response to Arguments***

Applicant's arguments filed 07-29-04 have been fully considered but they are not persuasive. Claim 18, which is a new claim, does not set forth any wire sizes, wire turns number or current carrying capabilities other than mentioning that the motor has windings of a wire size 4 to accept a current at least substantially up to the current carrying capacity of the source without heating. Applicant is directed to page 2 in the translation of the French patent, at least paragraph, which states, "the electric motor of the blower fan is an induction motor mounted in series on the electrical circuit (single or polyphase) of the heating apparatus such that it operates at the alternating heating current and is wound with wire of large enough cross section to support the heating current without overheating". Clearly Applicant can see that all of the limitations set forth in claim 18 are anticipated by the French patent. The French patent also mentions

Art Unit: 3742

that "heavier wire and lower number of turns for higher current at low voltage " can be used. (page 5). One of ordinary skill in the art in motor windings and controls would find proper motivation in the French patent to choose a proper size wire having a suitable number of turns, dependent on the current anticipated through the circuit. The other claims pending in the case are allowed in view of their claiming the number of windings and number of turns as stated in the claims, features not taught in the prior art of record.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

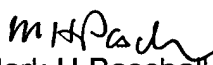

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
